

VERTEX 4D - Demo Rehearsal Evidence Pack

Ensayo completo con seed demo: dashboard, cohort, intervention queue, comments/rubric, Decision Memo print y Outcome Report print.

Campo	Valor
Fecha de ensayo	2026-08-24
Branch	agent/vertex-v4-redesign
Commit base del ensayo	6709b1e
Demo cohort	cohort_83a643a003
Facilitator login	facilitator@northstar-demo.example / vertex-demo-2026
Servidor local usado	http://127.0.0.1:8010

Resultado ejecutivo

- El flujo buyer-facing completo se pudo recorrer de punta a punta con datos demo realistas.
- Se generaron PDFs de navegador para el Decision Memo y el Cohort Outcome Report.
- Las vistas print son las mas presentables para entregar al buyer: limpias, trazables y con disclaimer de no-overclaim.
- La UI web normal funciona, pero el tema claro tiene bajo contraste en tablas, labels secundarios y algunos bloques largos.
- El producto esta listo para un rehearsal interno y casi listo para demo buyer; antes de buyer en vivo conviene corregir contraste y probar responsive mobile.

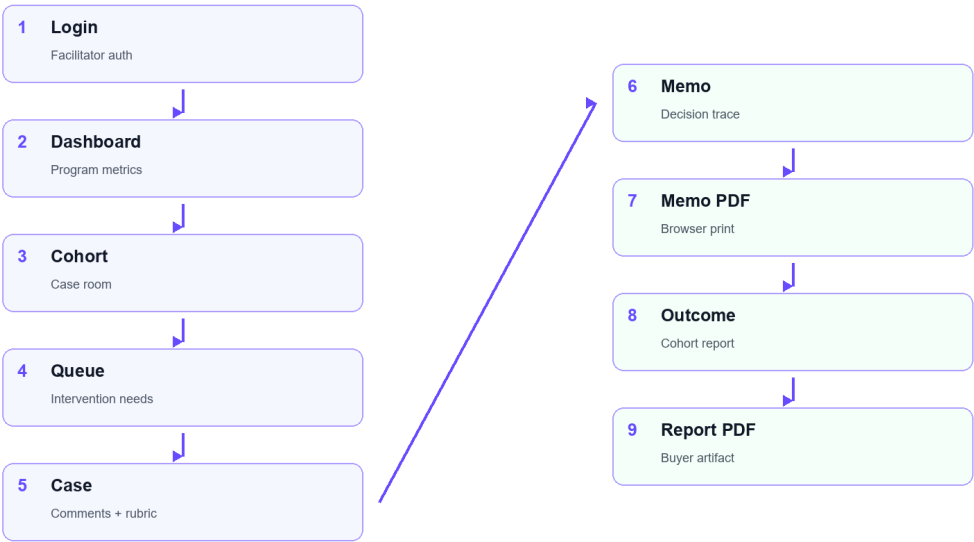

Artifacts generados

Artifact	Ruta
Decision Memo PDF	docs/demo_rehearsal_assets/decision-memo-run_demo_economics_changed.pdf
Cohort Outcome Report PDF	docs/demo_rehearsal_assets/cohort-outcome-report-demo.pdf
Capturas PNG	docs/demo_rehearsal_assets/01-login.png a 09-outcome-report-print.png
Manifest del ensayo	docs/demo_rehearsal_assets/capture_manifest.json

Secuencia en grafica

La ruta ejecutada replica lo que veria un buyer al observar una demo institucional guiada.

VERTEX 4D demo rehearsal sequence

Grafica de la secuencia recorrida durante el ensayo.

Flujo dual actual

VERTEX ya opera con dos carriles conectados: el founder produce evidencia y decision traceability; el facilitator convierte esa evidencia en seguimiento de cohort, intervenciones y artifacts institucionales.

Current dual flow

Founder flow

Facilitator / institution flow

Flujo dual actual: founder flow y facilitator/institution flow.

Capturas y resultado de cada paso

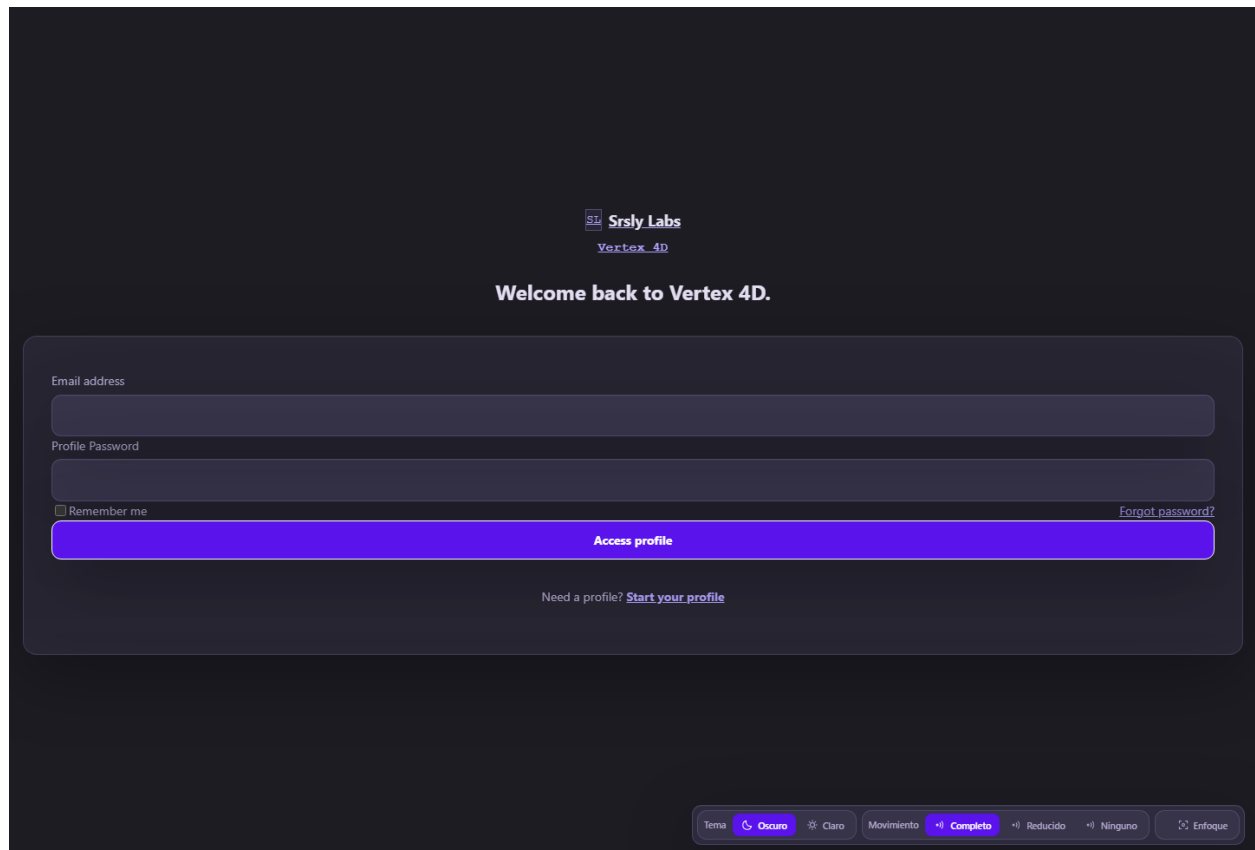

Paso	Pantalla	Que hice	Que paso
1	Login	Open the live local app and prepare facilitator authentication.	Login page loaded correctly.
2	Facilitator dashboard	Open the program-level dashboard after facilitator login.	Dashboard renders cohort metrics, Decision Case counts, locked snapshots and open comments.
3	Cohort case room	Open the seeded demo cohort case room.	Cohort totals, add-case controls and intervention queue are visible.
4	Intervention queue	Focus the cohort page on the intervention queue.	SkillBridge and ClinicFlow appear as honest intervention needs with reasons.
5	Case comments and rubric gap	Open the case that needs facilitator intervention.	Open comment and missing post score are visible on the case.
6	Decision Memo	Open the economics-changed Decision Memo.	Memo shows initial decision context, final decision, pricing insight and artifact traceability.
7	Decision Memo print view	Open print-friendly Decision Memo artifact.	White print view includes generated timestamp, run/team/cohort identifiers, traceability IDs and no-overclaim disclaimer.
8	Cohort Outcome Report	Open the cohort-level institutional report.	Report summarizes completion, baselines, DecisionRecords, stakeholder/price/decision changes and intervention needs.
9	Outcome Report print view	Open print-friendly Cohort Outcome Report artifact.	White print view includes cohort identifiers, case table, missing data labels, methodology and no-overclaim disclaimer.

The screenshot displays a web interface for 'SkillBridge apprenticeship matching'. At the top, a header bar for 'ClinicFlow intake assistant' shows the demo path 'Demo: ClinicFlow / run_demo_baseline_risk' and several status buttons: 'baseline not locked', 'DecisionRecord missing', 'open facilitator comments', 'baseline score missing', 'post score missing', and 'Open case'. Below this, the main section is titled 'SkillBridge apprenticeship matching' with a breadcrumb 'Demo: SkillBridge Studio / run_demo_intervention'. It features buttons for 'system_map', 'snapshot locked', '1 open comments', and 'needs intervention'. On the left, under 'Open comments', there's a text area with the instruction 'Clarify the school consent path before approving post-score or DecisionRecord.' and a 'problem_frame' button. Below this is an 'Attach to' section with a 'Comments' button and an 'Add comment' button. A 'Comment' text area is also present. On the right, the 'Decision Quality rubric' section shows 'Baseline 2.0 / Post missing / Delta missing'. It includes a table with columns 'Stage', 'Total', 'Reviewer', and 'Notes'. The table has one row for 'baseline' with a total of '12/30' and a reviewer 'facilitator@northstar-demo.example'. Below the table are five rows of criteria: 'Stage', 'System awareness', 'Behavioral logic', 'Decision action', and 'Notes', each with a dropdown menu. To the right of these are four more criteria: 'Framing', 'Evidence quality', 'Economic coherence', and 'Notes', each with a dropdown menu. A 'Save score' button is located at the bottom right of the rubric section.

Paso 6: Decision Memo

Que hice: Open the economics-changed Decision Memo.

Que paso: Memo shows initial decision context, final decision, pricing insight and artifact traceability.

URL: http://127.0.0.1:8010/dashboard/lab/decision-memo?run_id=run_demo_economics_changed

The screenshot displays the 'Decision Memo' interface within the Vertex 4D 'SaaS Lab'. The header includes the Vertex 4D logo, a 'Decision Memo' tab, and links for 'Print', 'DecisionRecord', and 'Facilitator'. The main content area is titled 'RepairLoop circular parts exchange Decision Memo' and includes a status bar 'locked · run_demo_economics_changed'. A sub-header states: 'This memo documents decision quality and traceability. It does not predict startup success.' On the right, there are three interactive buttons: 'test Initial decision', 'approved Approval', and 'Open comments'. The central section, titled 'Final decision', features a large blue box with the text: 'Pilot one parts category at USD 89 per month before adding inventory breadth.' To the right of this box, a table provides context:

problem	cost	next tool
The decision depends on whether a single high-frequency parts category can absorb inspection and return handling costs.	Reverse logistics cost could still erase contribution margin.	Run a four-week parts-category pilot with five shops and track replacement time plus return cost.

Below the table, it specifies 'Demo: RepairLoop' and 'USD 49 intuition -> 89.0 modelled'. The bottom section is divided into two main areas: 'Stakeholder System' and 'Traceability'. The 'Stakeholder System' area lists 'shop owner, technician, parts supplier, warranty desk, logistics partner' and includes an 'Adoption / Resistance Hypothesis' stating: 'Shops may accept a higher monthly fee if warranty replacement time falls and return rules are explicit.' The 'Traceability' area lists a series of artifacts: 'project_record: project_record_run_demo_economics_changed', 'problem_frame: problem_frame_run_demo_economics_changed', 'system_map: system_map_run_demo_economics_changed', 'predictive_hypothesis: predictive_hypothesis_run_demo_economics_changed', 'financial_scenario: financial_scenario_run_demo_economics_changed', and 'decision_record: decision_record_run_demo_economics_changed'. At the bottom, two summary boxes provide additional context: 'Problem framing narrowed the decision for RepairLoop circular parts exchange' (linked to 'ev_cafe_opa_note') and 'Stakeholder mapping surfaced approval, blocker and operating roles' (linked to 'ev_washing_logistics_note'). A final box on the right notes: 'Reverse logistics cost could still erase contribution margin.' (linked to 'hypothesis') and 'Repeat return rate and container loss remain unknown.' (linked to 'unknown').

Captura 6: Decision Memo

Paso 7: Decision Memo print view

Que hice: Open print-friendly Decision Memo artifact.

Que paso: White print view includes generated timestamp, run/team/cohort identifiers, traceability IDs and no-overclaim disclaimer.

INITIAL DECISION
test

APPROVAL
approved

Final Decision

Pilot one parts category at USD 89 per month before adding inventory breadth.
This memo documents decision quality and traceability. It does not predict startup success.

PROBLEM STATEMENT
The decision depends on whether a single high-frequency parts category can absorb inspection and return handling costs.

PRICING / FINANCIAL INSIGHT
USD 49 intuition -> 89.0 modelled

NEXT EXPERIMENT
Run a four-week parts-category pilot with five shops and track replacement time plus return cost.

Stakeholder System

- shop owner
- technician
- parts supplier
- warranty desk
- logistics partner

Adoption / Resistance Hypothesis

Shops may accept a higher monthly fee if warranty replacement time falls and return rules are explicit.

Evidence Supporting The Decision

Methodology and disclaimer.

This report summarizes VERTEX Decision Cases attached to the cohort. Metrics come from locked baseline snapshots, saved artifacts, facilitator comments, decision quality scores, pilot feedback events, and AI usage logs where present. Missing data is marked as missing and is not inferred. VERTEX does not predict startup success. This report is not a validation guarantee, investment recommendation, or substitute for buyer due diligence.

Captura 9: Outcome Report print view

Estado frente al roadmap

Determinacion: VERTEX esta en cierre de Meses 0-2 y entrando a Meses 2-4. Tiene algunos artifacts de Meses 4-6 adelantados, especialmente Outcome Report y print/export por navegador, pero aun falta validacion comercial real con cohorts pagados.

Roadmap	Estado	Evidencia actual	Falta
Meses 0-2: Pilot hardening	Mayormente logrado	Journey demo estable, baseline/post assessment, Decision Memo, dashboard facilitador, analytics/eventos y reportes print.	Ajuste de contraste/responsive QA completo; Evidence Gate mas explicito como gate de producto.
Meses 2-4: Alpha y Beta pilots	Listo para iniciar	Seed demo cubre 5 casos, intervention queue, comentarios, rubric pre/post y pricing experiments como narrativa.	Ejecutar 8-12 founders reales, luego 20-40 equipos; medir friccion y completar feedback real.
Meses 4-6: Commercial V1	Parcial adelantado	Outcome reports, print artifacts, checklist, proposal, follow-up docs y roles basicos.	Cohort setup mas robusto, better export, permisos formales, onboarding institucional y 3-5 pilotos pagados.
Meses 6-9: Institutional readiness	No iniciado	Hay privacidad practica y docs iniciales, pero no enterprise readiness.	Multi-program dashboard, SSO/SAML, security documentation, white-label ligero, export/API basico.
Meses 9-12: Scale test	No iniciado	La base conceptual esta, pero aun no hay escala comercial.	Annual licenses, self-service paid, vertical templates, cohort benchmarking, LMS integrations si ventas lo justifica.

Faltantes recomendados antes de buyer demo

- Ajustar contraste del tema claro en dashboard, cohort table, report web y texto secundario.
- Hacer QA responsive mobile real, porque aun no se valido en este ensayo.
- Pulir el layout web normal del Decision Memo para que el bloque de decision final no domine excesivamente.
- Convertir Evidence Gate en un checkpoint explicito dentro del journey, no solo evidencia trazable en artifacts.
- Ejecutar un rehearsal con narracion de 8-12 minutos usando docs/VERTEX_DEMO_SCRIPT.md y medir tiempos.
- Despues del demo interno, correr 8-12 founders reales como Alpha pilot y reemplazar demo assumptions por evidencia real.

Handoff operativo

Tema	Estado actual
Seed command	python -m scripts.seed_demo_cohort --json
Reset command	python -m scripts.seed_demo_cohort --reset-demo
Start app	python -m uvicorn main:app --host 127.0.0.1 --port 8010
Facilitator	facilitator@northstar-demo.example / vertex-demo-2026
Dashboard	http://127.0.0.1:8010/dashboard/facilitator
Cohort	http://127.0.0.1:8010/dashboard/facilitator/cohorts/cohort_83a643a003
Decision Memo print	http://127.0.0.1:8010/dashboard/lab/decision-memo/print?run_id=run_demo_economics_changed
Outcome Report print	http://127.0.0.1:8010/dashboard/facilitator/cohorts/cohort_83a643a003/outcome-report/print
No push	Confirmado: no se hizo push durante este ensayo.

Notas de verdad comercial

- El demo prueba decision quality, traceability, before/after evidence e intervention need.
- No prueba market success, investment readiness, startup validation garantizada ni due diligence del buyer.
- Los datos son demo y estan marcados como Northstar / Demo; no deben mezclarse con claims de pilotos reales.
- El siguiente paso recomendado es un rehearsal buyer-facing cronometrado y despues un Alpha pilot con 8-12 founders reales.
