## Final Decision

Pilot one parts category at USD 89 per month before adding inventory breadth.

This memo documents decision quality and traceability. It does not predict startup success.

|                                                                                                                                                                           |                                                                                                  |                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| <div><div>PROBLEM STATEMENT</div><div>The decision depends on whether a single high-frequency parts category can absorb inspection and return handling costs.</div></div> | <div><div>PRICING / FINANCIAL INSIGHT</div><div>USD 49 intuition -&gt; 89.0 modelled</div></div> | <div><div>NEXT EXPERIMENT</div><div>Run a four-week parts-category pilot with five shops and track replacement time plus return cost.</div></div> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|

## Stakeholder System

- shop owner
- technician
- parts supplier
- warranty desk
- logistics partner

## Adoption / Resistance Hypothesis

Shops may accept a higher monthly fee if warranty replacement time falls and return rules are explicit.

## Evidence Supporting The Decision

| EVIDENCE ID               | SUMMARY                                                                       | SOURCE ARTIFACT                          |
|---------------------------|-------------------------------------------------------------------------------|------------------------------------------|
| ev_cafe_ops_note          | Problem framing narrowed the decision for RepairLoop circular parts exchange. | problem_frame_run_demo_economics_changed |
| ev_washing_logistics_note | Stakeholder mapping surfaced approval, blocker and operating roles.           | system_map_run_demo_economics_changed    |

## Risks And Unknowns Remaining

| ID                       | STATEMENT                                                     | CLASSIFICATION |
|--------------------------|---------------------------------------------------------------|----------------|
| risk_staff_burden        | Reverse logistics cost could still erase contribution margin. | hypothesis     |
| unk_return_rate_decision | Repeat return rate and container loss remain unknown.         | unknown        |

## Comments Summary
